

6 Bad UX with their solutions

Real life Bad UX

Glass Ashtray

What's the problem?

This is a regular glass ashtray, which is common in both domestic and café use. It is an open-top ashtray with cigarette-holding ridges.

The issue is when I'm done smoking and I let the cigarette sit in the ashtray, even the slightest breeze from a fan, window, or AC sends ash flying all over the place making a mess and possibly ruining surrounding things such as electronics.

As opposed to most plastic ashtrays, which now have lids or wind shields, conventional glass ashtrays do not have this vital component. This renders them unsuitable in contemporary indoor settings.

The Solution is to Redesign the glass ashtray by:

- Having a transparent heat-resistant glass or silicone lid with small access flaps or turning top to enable disposal of cigarettes without letting ash out.
- Creating a double-layered design where ash falls into a closed lower chamber, minimizing contact with airflow.
- Retaining the retro look but incorporating contemporary functionality for enhanced cleanliness and ease of use.

Curtains with Sliding Rings

The problem:

- Ring begin to loosen or fall off the curtain rod.
- Misalignment makes the curtain hard to open/close
- it's on a daily usage and requires frequent fixing or reattaching.

The solution:

Sewed rings can be effective making this curtain durable for long time use and wouldn't fall of since it's sewed as rings.

Sunset Lamp

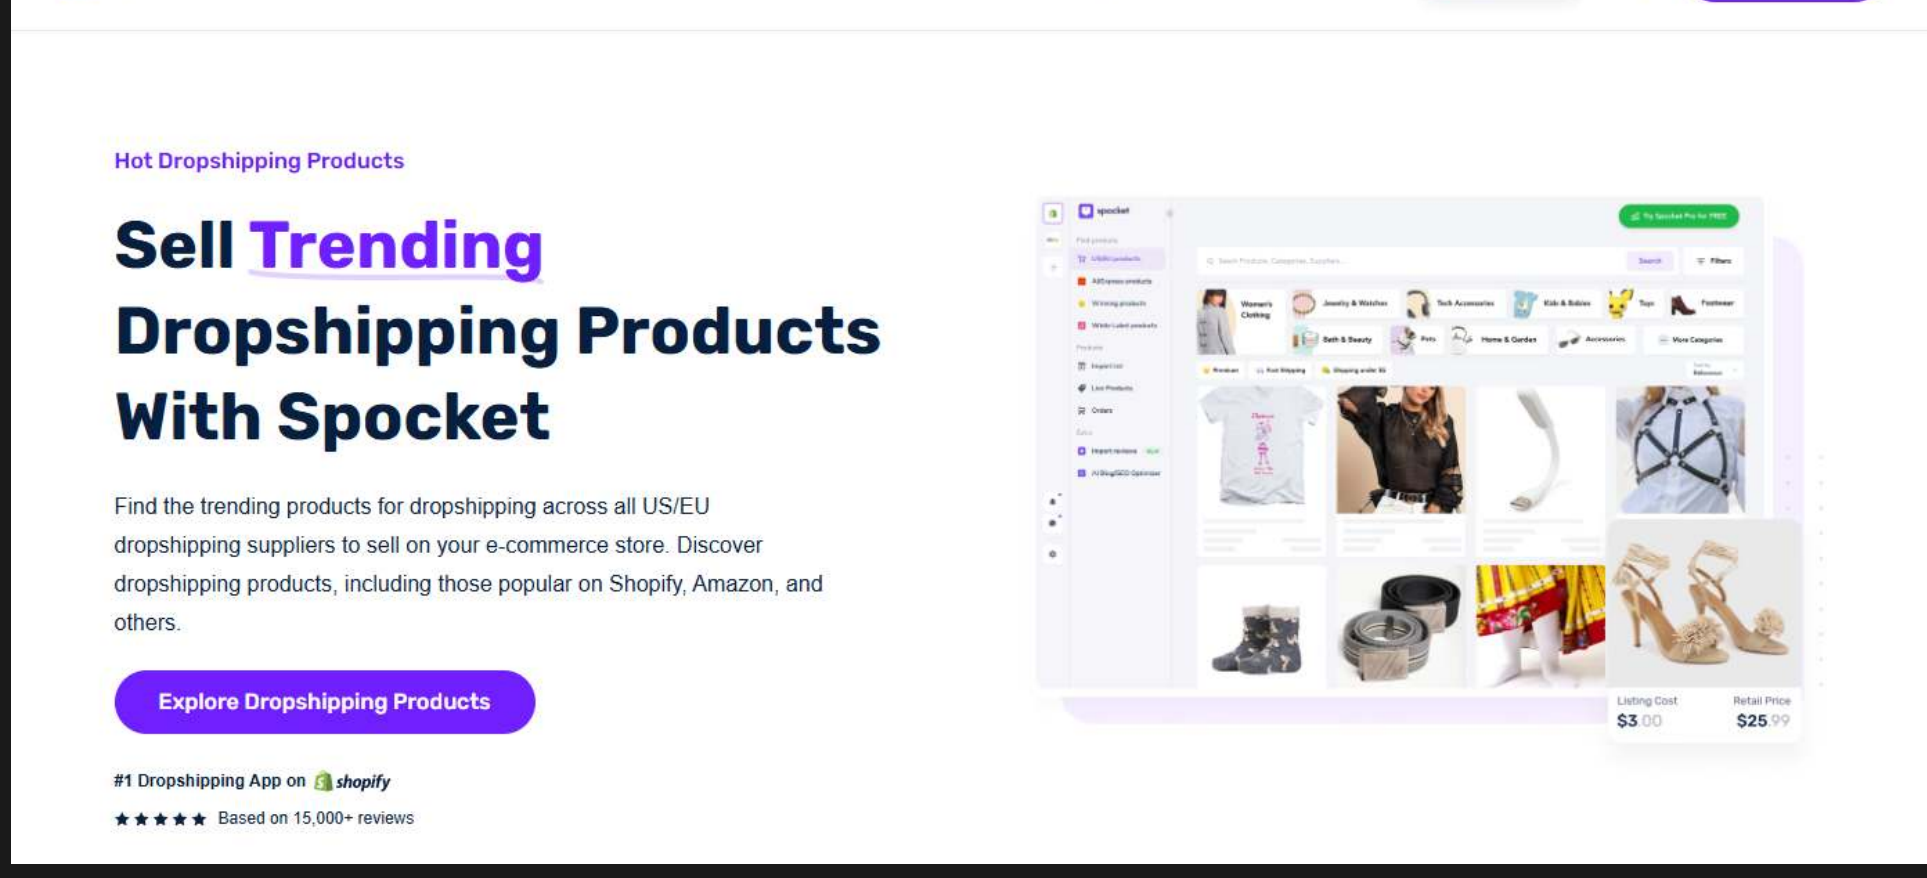

The problem:

- Automatically turn on as soon as you plug it, that will cause flash directly in the eyes that's not comfortable
- doesn't have optional Projection adjustments for the light like wide or Narrow

The solution:

To fix the automatic turn on there should be a switch to prevent it from auto turn on and for the adjustments there should be 2 options at least by adding a swappable filters ring around it that can make it wide or narrow but not just fixed circular light.

Digital Bad UX

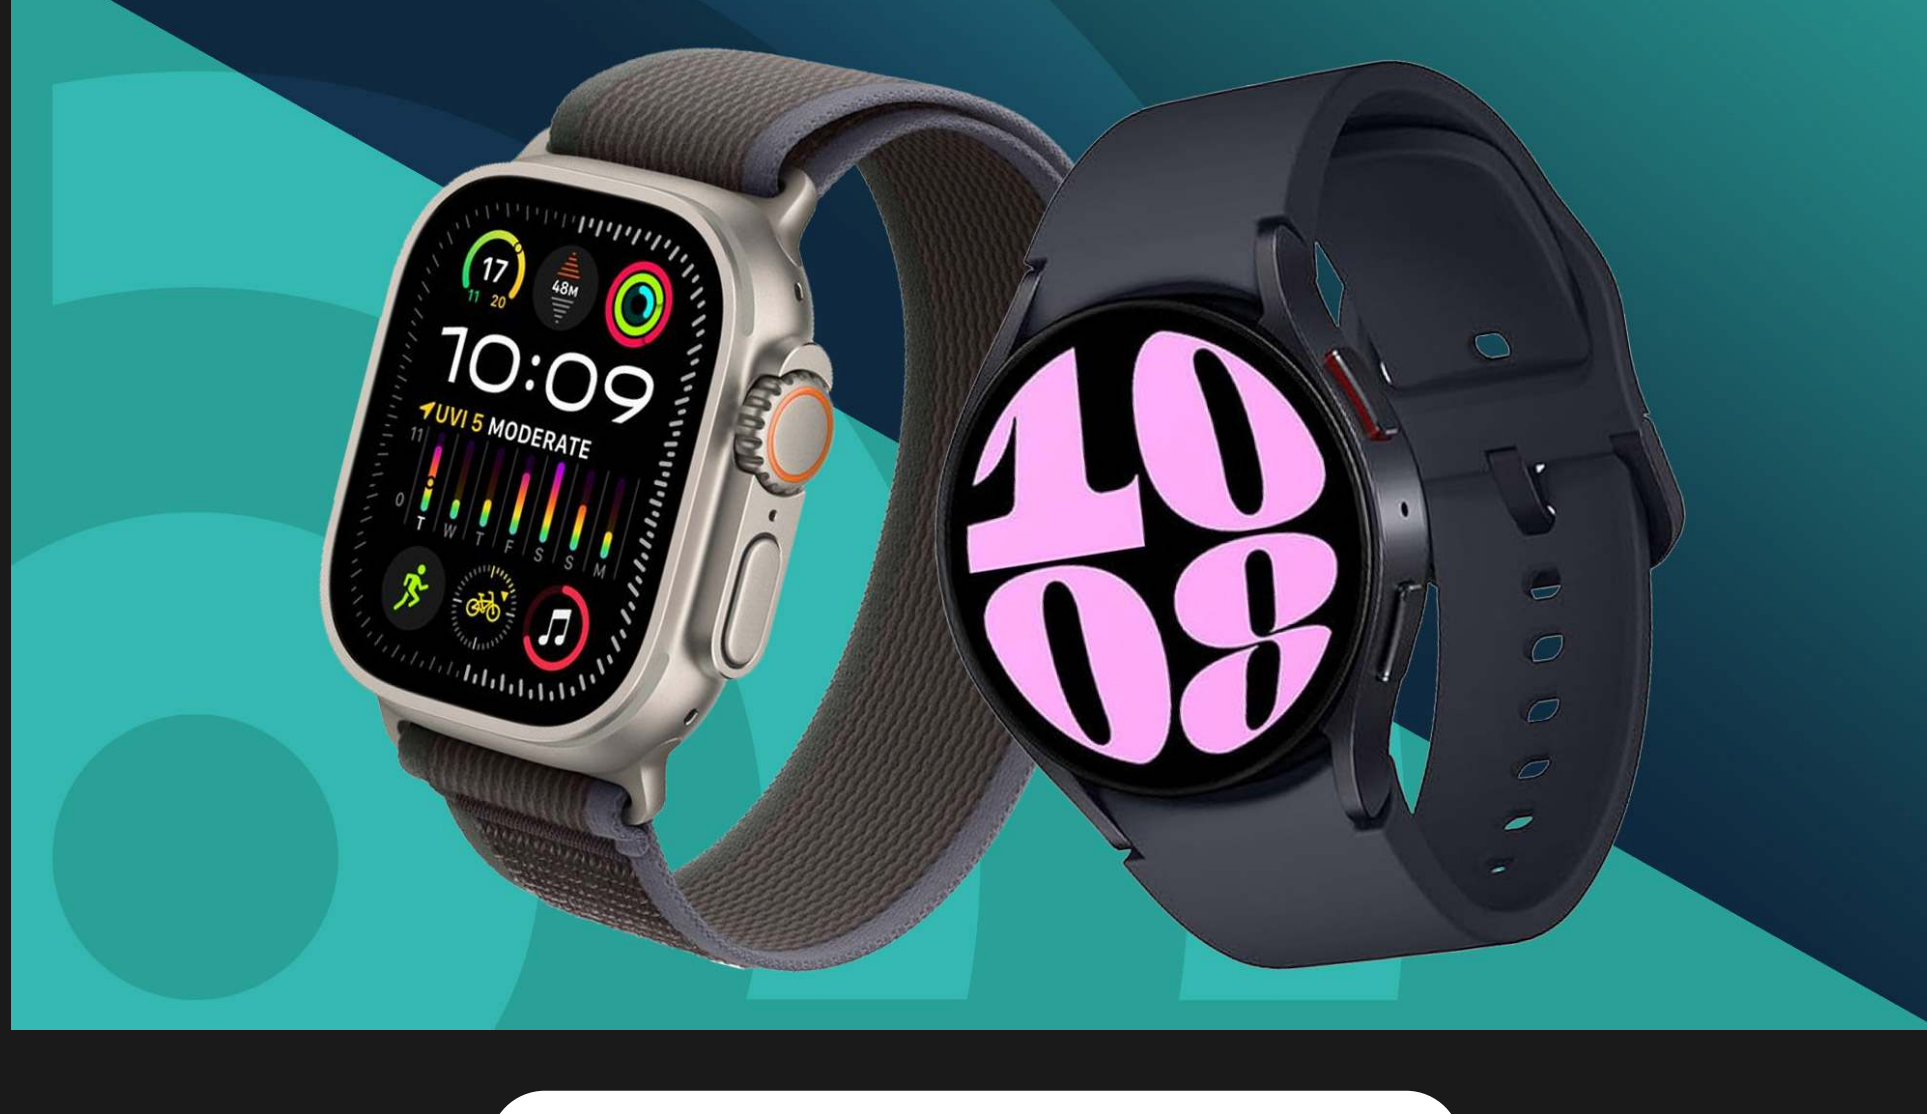

spocket e-commerce website

The problem:

- Exploring Dropshipping Products button when you press it, it's inaccessible unless you add payment method.

The solution:

The explore button should lead directly to the Headed page and when there's a potential client that wanted to participate in their dropshipping program they should ask for a payment method

Smart watch software

The problem:

- Smart watches are commonly used to serve as an assistant for the mobile phones keeping the user up to date by receiving notifications, measure heartbeats and steps and much more, to have a successful satisfaction process you need to do 2 things:

1. Pair the device

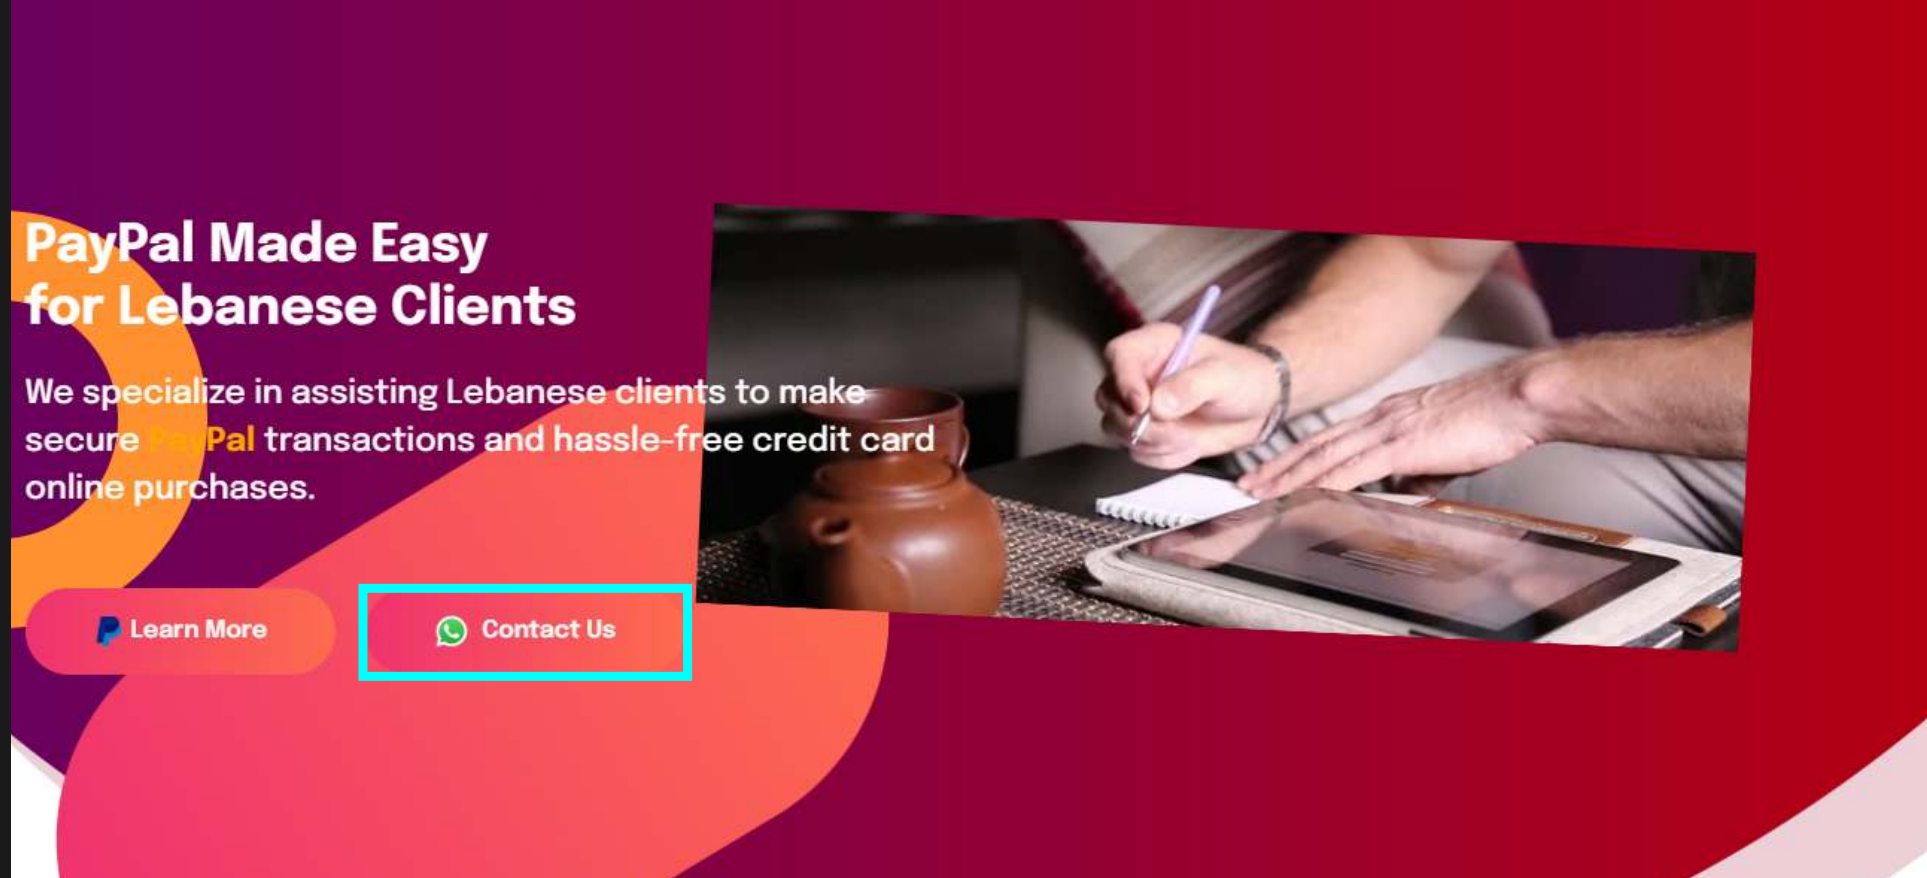

2. Download the software

The issue is with the software, most of the smart watches got a chinese website or a discontinued website leading the user to struggle with downloading even with the discontinued app.

The solution:

- Websites should support at least the international language
- Software should be up to date because the product is still in the markets being sold

Note: A slight investment in these can make a huge sales.

The problem:

1. Two contact us CTA

2. buttons color contrast

The solution:

Keep only 1 CTA, i prefer the top one

Change the button colors other than gradient a color that match the color contrast
